

# Potentiometers and Sensors

for industrial applications

1963

Foundation of the company by  
Hans-Juergen Altmann in Herford

1974

Relocation to the present site  
in "Herringhauser Straße"

1987

Enlargement of the company's premises

2005

Certification according to ISO 9001

2013

50th company anniversary

2016

Alexandra Altmann, daughter of the founder Hans-Juergen Altmann, takes over the leadership of the family company as the General Manager

# Tradition meets Future

Alexandra Altmann, Hans-Juergen Altmann

## Company profile

Since foundation of the company in 1963 we have been focusing on the development, construction and manufacturing of potentiometers as well as sensors for path, angle and position detection for industrial applications.

We offer products in the highest precision, rounded by an adequate and comprehensive service supply. Starting from the first design to the final serial product we are by your side with a longtime experience.

Our comprehensive standard program will be completed by customised single- and special solutions, focusing the quality on an appropriate cost effectiveness.

As the leading manufacturer of potentiometers and sensors our components are characterised by the highest precision.

Beside standard and customised solutions we offer an added value through the integration of our components in the particular application.

Our products are characterised by multiple diversity of variants. Pre-assembled components and co-ordinated processes enable a fast delivery.

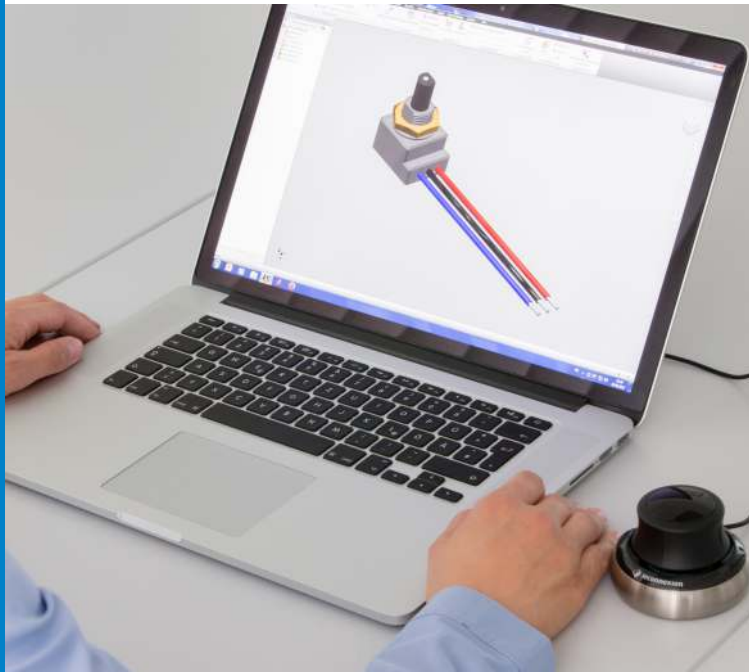

## Manufacturing processes

Distinct vertical depth of manufacturing due to the following processes:

- Final assembly of the smallest components and units
- Winding of the resistance wire
- Fixture construction and tool making
- Hot stamping
- Spot welding
- Plastic ultrasonic welding
- Marking and printing
- Various adhesive technologies

## Development

From project planning until series production we are your competent partner. Development – single orders are possible as well.

- Joint development of customised solutions
- With or without final assembly
- Feasibility studies
- Testing of prototypes, samples and serial parts

## Applications

We develop and manufacture for the following branches:

- Machinery and plant construction
- Shipbuilding and vehicle construction
- Medical technology
- Aviation and space technology
- Data and security technology
- Power engineering

vocational training  
(commercial and industrial)
